PROFESSIONAL EXPERIENCE

AI Automations Specialist, *EarthChimp* 🌐

04/2026 – Present
Dublin, Ireland

- **Infrastructure & DevOps Ownership:** Architected a dual-server production/sandbox environment using **Docker Compose** and **Nginx Reverse Proxy**; implemented automated SSL termination and a custom host-guard pattern for crons to prevent execution conflicts across environments.
- **AI Data Engineering:** Built an end-to-end sentiment analysis pipeline on **Supabase**, processing 4,300+ historical records using **Claude 3.5 Sonnet** and n8n webhooks, resulting in a unified customer feedback database.
- **B2B Compliance & Security:** Spearheaded the **Amazon SP-API Restricted-Roles** application, authoring Data Protection Policies (DPP) and Privacy Policies for GDPR compliance while hardening server security via **auditd** and SSH-key-only authentication.
- **Autonomous Discovery Pipeline:** Designed a 3-tier affiliate discovery system using **Thompson Sampling** and LLM-based screening, achieving a 25% yield baseline in lead generation while reducing third-party API costs from \$200+ to \$5 per run.
- **System Reliability & SRE:** Root-caused and resolved a critical production outage involving a 2GB database bloat by debugging NaN cron deltas in environment variables; implemented a size-adaptive auto-prune script for database maintenance.
- **API & Lifecycle Management:** Developed idempotent Python scripts for **Meta/Instagram Graph API** (token refresh automation) and **Amazon Ads API**, unblocking data visibility across 15+ international marketplaces.

AI Automation Engineer, *GoTeam / Multiplai.tech* 🌐

10/2025 – 03/2026
Cebu City, Philippines

- **Technical Mentorship & Enablement:** Facilitated weekly technical lab sessions for a team of internal AI Coaches, providing hands-on training on custom n8n and Make.com 🌐 workflows to ensure 100% operational alignment and user adoption.
- **Knowledge Transfer (KT) Architecture:** Engineered and maintained a standardized "Lab Session" protocol, translating complex automation logic into actionable SOPs for stakeholders while maintaining a 95% satisfaction rate across the coaching team.
- **Process Automation:** Optimized HR workflows via Power Automate, streamlining leave requests and resolving critical API mailbox conflicts.
- **Safety Intelligence:** Deployed a Slack bot using GPT-4 and Open-Meteo API to deliver real-time weather alerts via unstructured data parsing.
- **Data Engineering:** Engineered a productivity pipeline using JavaScript to transform raw JSON datasets into hierarchical management reports.
- **Core Product Integration:** Architected and implemented seamless API integrations for various third-party tools (SaaS/CRMs) into the company's proprietary automation platform, expanding product compatibility and user use cases.
- **Legacy System Optimization:** Managed and refactored legacy n8n workflows, reducing execution errors by 35% and improving system reliability through modernized node configurations and error-handling logic.
- **Infrastructure Maintenance:** Oversaw the end-to-end maintenance of production-level automations, ensuring 99.9% uptime and performing regular version upgrades for n8n instances and integrated dependencies.

Junior Platform Engineer, Trax Technologies Asia Co.

02/2025 – 07/2025
Cebu City, Philippines

- Developed Python scripts and services for Elasticsearch index cleanup, inbox monitoring, and email attachment processing, improving automation and efficiency.
- Implemented database logging (PostgreSQL/MySQL) for event tracking, metadata storage, and audit trails.
- Built a Flask-based ProFTPD UI for secure file uploads/downloads with role-based access.
- Configured Zabbix templates and tagging for reusable monitoring (disk space, ports, processes, file routers).
- Enhanced Kibana index templates with new fields (subject, tags, regexes) for advanced log searches.
- Delivered reports and training sessions, including Python burndown trend reports and a knowledge transfer on dashboard monitoring.

Platform Engineer Intern, Trax Technologies Asia Co.

10/2024 – 01/2025
Cebu City, Philippines

- Built a Flask-based ProFTPD UI for secure file uploads, downloads, and management with drag-and-drop functionality.
- Integrated database-driven user permissions for role-based access control.
- Delivered a production-ready file management solution adopted internally.
- Assisted in developing a 24-hour color-coded file monitoring system for data freshness.
- Supported discovery and debugging for file routing and email pipeline issues.

SKILLS

- **Automation & LLM Orchestration:** n8n (Self-hosted/Advanced), Make.com , REA, Prompt Engineering (Structured JSON), LLM Pipelines (Claude, GPT-4), Agentic Workflows.
- **Programming & Scripting:** Python (Advanced), JavaScript/Node.js, C, C#, Java, PHP, Regex, Bash Scripting.
- **Data Engineering & ML:** Supabase (PostgREST), PostgreSQL, MySQL, SQLite, Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, BeautifulSoup, Selenium.
- **Infrastructure & DevOps:** Docker & Docker Compose, Nginx (Reverse Proxy, SSL), Linux System Administration (Ubuntu/Debian), GitHub Org Management, SSH Hardening, Cron Orchestration.
- **Security & Compliance:** Amazon SP-API Restricted-Roles, Data Protection Policy (DPP) Authoring, GDPR Compliance, auditd, Secret Management & Rotation.
- **Monitoring & Observability:** Zabbix, Kibana/Elasticsearch, Fail2ban, HSTS, Rate Limiting, Audit Log Review.
- **Frontend & Design:** React, HTML5, CSS3/SCSS, UI/UX Design, Figma.
- **Tools & Others:** Git, GitHub Actions, Dependabot, Swagger, Arduino, Data Visualization (Matplotlib, Seaborn).

EDUCATION

Bachelor of Science in Computer Science, University of San Carlos

08/2021 – 07/2025

- GWA: 1.91
- Relevant Coursework: Algorithms & Data Structures, Programming Languages, Operating Systems, Networking, System Design and Analysis, Data Analysis, Information Assurance and Security, Web and Mobile Development.

PROJECTS

Pointview [!\[\]\(a03a7eb2f4046e1d3c76772003e549ea_img.jpg\)](#), *A unified scoring index using Natural Language Processing and Machine Learning*

- Developed a unified scoring system using NLP and ML to analyze hotel and restaurant customer reviews for sentiment and service insights.
- Built Python pipelines for data scraping (BeautifulSoup, Selenium), preprocessing (NLTK, spaCy, TextBlob, SymSpell), and topic modeling (Gensim, Scikit-learn).
- Implemented data visualization with Matplotlib and WordCloud to present sentiment trends and aspect-based insights.
- Processed review datasets (Agoda, etc.) using Pandas & NumPy for data cleaning, transformation, and analysis.

ProFTPD Management System [!\[\]\(e474458956c9a37fbf9586ddb60a7fa1_img.jpg\)](#)

- Built a web-based management system for ProFTPD with separate Admin and SFTP interfaces.
- Designed user/group management, permissions, quotas, log monitoring, and server configuration features for administrators.
- Developed a secure SFTP client with LDAP authentication for file upload, download, and directory management.
- Implemented role-based access controls, storage statistics, and activity logs for security and monitoring.
- Used Python (Flask, SQLAlchemy) for the backend, MySQL for data storage, and Bootstrap/JavaScript/HTML5 for the frontend.

GABS USC [!\[\]\(5361750c22c4e047a52f4eac1ec2d4cc_img.jpg\)](#)

- Developed a Java-based campus guide application for University of San Carlos students, featuring an interactive map, office/canteen directory, and transportation guide.
- Focused on backend development, integrating MySQL for user data, authentication, and application modules.
- Implemented database connectivity and error handling with JDBC, ensuring reliable data transactions.
- Designed GUI components (Java Swing/JFrame) for map navigation, student services, and transport information.

Taskify [!\[\]\(4fe57c3593bf1b21d272ae7ac8dfaf77_img.jpg\)](#)

- Developed the frontend of a task management system for Modern Foliage using React, SCSS/CSS, and modular UI components.
- Designed user-friendly dashboards, modals, and forms for task creation, editing, and completion.
- Integrated Axios with backend APIs to handle user authentication (JWT), staff/admin role-based access, and CRUD task operations.
- Collaborated with the team to connect the Node.js (Express) backend and MySQL database to the React interface.
